ROUND PROFILE

The composition of round wire offers great flexibility and excellent cutting results.

The round profile is the ultimate all-rounder. It is ideal for clearing grass, brush and small weeds.

STAR PROFILE

Thanks to its sharp angles, the star profile has greater cutting power than the round wire. We recommend using it for weeds and light brush.

SQUARE PROFILE

Square wire is stronger and more effective than round or star wire. Its extra mass (around 20%) makes it more resistant to impact, and its tapered angles gives it a high cutting quality. It is recommended for heavy-duty brush cutting in dense vegetation.

ALUMINIUM SQUARE PROFILE

Aluminium wire has the same composition as square wire with the addition of fine aluminium particles that makes it more shock resistant. This wire offers high cutting power and greater resistance than all other profiles. Recommended for cutting dense vegetation and undergrowth, or working along the edges of pavements.
